

AI Security. Solved.

FireTail

Protect your AI innovation from the rapidly evolving risks of tomorrow.

AI is driving the next wave of digital transformation, reshaping industries, and revolutionizing how we work. But every revolution brings new risks. AI-specific security challenges are emerging faster than traditional security tools can adapt.

Secure your AI initiatives with FireTail and harness the full potential of AI with confidence. Our purpose-built AI security platform ensures that every connection in your AI ecosystem is secure.

97% of organizations reported security incidents related to Gen AI in the past year.

Tackling the New AI Threat Landscape

AI adoption introduces unique risks that require specialized protection. FireTail ensures your AI systems remain secure by addressing the critical challenges organizations face today:

Shadow and Rogue AI: AI tools and models are often deployed without security oversight. FireTail continuously discovers and monitors AI integrations, providing full visibility.

Rapidly Evolving Threats: As AI evolves, so do the risks. FireTail helps you to quickly identify vulnerabilities and misconfigurations across all of your AI initiatives.

Real-time Attacks: Prompt injection, improper output handling, and system prompt leakage are difficult to identify with traditional security tools. FireTail detects these threats in real time allowing you to react quickly and minimise the impacts of attacks.

Unauthorized Data Exposure & Compliance Risks: AI models frequently process sensitive, regulated data. FireTail continuously monitors AI inputs and outputs to detect and mitigate compliance violations under GDPR, CCPA and other regulatory frameworks.

Advanced AI Security Capabilities

FireTail delivers unparalleled protection against AI-specific threats, using state-of-the-art detection, monitoring, and risk mitigation:

Continuous AI Discovery & Assessment: FireTail's AI security posture management engine automatically finds your AI integrations and assesses security risks.

Comprehensive AI Threat Detection: FireTail scans your entire AI ecosystem—code, models, and cloud environments—to uncover vulnerabilities, and detect anomalies.

Real-Time Attack Detection: FireTail protects against prompt injection, sensitive data leaks, supply chain risks, and system prompt exposure with automated threat detection, policy enforcement, and real-time alerts.

AI-Specific Risk Scoring & Compliance Monitoring: Identify and prioritize security gaps with FireTail's AI risk scoring engine, aligning to OWASP LLM, MITRE ATT&CK, and global compliance frameworks.

FireTail enables organizations to adopt AI safely, without sacrificing speed or innovation. **Protect your AI innovation and the connections that power it.**
